Budget Priced,  
Luxury Performance!

Ultra-Light Heavy-Duty  
4X5" Technical Camera

## Horseman 45HD

The Horseman Model 45HD is the latest addition to the Horseman's comprehensive range of large format technical cameras. A 4 x 5" field camera, model 45HD -- for "Heavy Duty" is fully compatible with film holders following the international standard, as well as with all Horseman components and accessories.

Thanks to its protectors guarding it on all four sides, the 45HD will cope with the rigorous demands of tough field work. Nevertheless, it is lighter in weight than other Horseman 4 x 5" cameras because of certain system simplifications.

After considering, in great detail, the actual needs of professional photographers whose work includes strenuous field assignments, Horseman has created the heavy-duty 45HD model. Although fully compatible with Horseman and other international standard 4 x 5" cameras, the 45HD offers several advantages in terms of simplified handling, rugged shock protection, lighter weight and, last but not least, competitive pricing.

Horseman 45HD

### *Shock Protection for Rugged Field Work*

The protectors made of a special synthetic material envelope the camera on all four sides, giving it the additional protection needed for heavy duty use in the field.

### *Lighter Weight*

Simplification of the swing & tilt functions and other construction details have resulted in a lighter camera weight, further facilitating field work. The 45HD camera body weighs a scant 1.7kg, making it the lightest metal-made 4x5" folding camera.

### *Competitively Priced*

Constructional simplification has allowed Horseman to offer this thoroughly professional camera at a surprisingly competitive price.
